OpenAI完成最新一轮66亿美元融资 警告投资者不准支持马斯克xAI等劲敌

赵雨荷 10-03 00:07

摘要:

本轮融资也是史上规模最大的私人投资之一，由Thrive Capital领投，参与者还包括微软、英伟达、软银等，其中微软投资约7.5亿美元。本轮融资过后，OpenAI的估值达到1570亿美元，跻身全球前三大初创公司的行列。同时，OpenAI希望与投资者达成独家协议，防止马斯克的xAI和Anthropic等竞争对手获得战略合作机会和资本支持。

The chart shows a significant upward trend in AI market capitalization over the past year. The Y-axis represents market capitalization in billions of dollars, ranging from \$0 to \$3,500. The X-axis shows time from November 2022 to October 2024. The line starts around \$500 billion in early 2023, rises steadily to about \$1,500 billion by April 2024, then fluctuates between \$2,000 and \$2,500 billion through October 2024.

What's New (Feb/4/2025-2)

DeepSeek-R1 is like the Watt Steam Engine and Ford Model T in the age of AI!

如何评价DeepSeek等大模型在中科院物理所理论竞赛中的表现？

更重要的是，Deepseek 在一定程度上打破了学术垄断，促进了学术界的智能平权。因为学术界的现状是，一般背景的学生和研究者没人指导，缺有价值的想法，更缺手把手的指导，科研卡住了也找不到人帮忙，只能自己死磕，磕不出来就等着延毕或GG。即使是大佬组的，好想法一定能轮得到你？大佬能天天手把手教你推公式？反正你自己太菜也怨不得别人。而且科研很多时候其实就差懂行的一句话，告诉你应该用某种方法解决，考虑XXX，不告诉你。你自己在文献堆里翻几个月都还不确定找得到找不到。要是你需要用的是某门现代数学，你望着艰深的符号，如果不是确定一定能解决自己的问题，心里早就打退堂鼓了。但你都不会，拿头确定？大佬的价值就在于此，他会凭丰富的经验给你一个确定性，这样你就能走下去。现在 Deepseek 当然达不到真正的大佬的程度，但超越一些不甚合格的导师还是绰绰有余，而且也能手把手教你。顶尖研究组可能看不上 Deepseek 给的想法和指导，毕竟 SOTA 只是小圈子里的知识，AI 不一定知道。但对于广大学术底层，这可就太有用了，这玩意简直就是开挂，效率一下提升一个数量级也不是没可能。况且，牛组的人真的就是靠智商吗？恐怕内部信息才是真正的护城河。Deepseek 虽然不能完全消除你的护城河，但会降低其他人复现的时间成本。普通组在有了 Deepseek 的加持下，是有希望做出之前只有牛组才能做出的工作的。

那这些意味着什么呢？

没错，学术生产的手工作坊模式^{*}要被撼动了。

DeepSeek 登顶苹果美国区免费 APP 下载排行榜，与 ChatGPT 相比...

3，最大的影响，在于用很低的成本将一个能力非常强的模型开源到本地，在政府应用尤其是安全方面的应用中，在数据比较敏感的企业内部应用中，已经产生了较大潜在影响。受冲击最大的是 kimi、qwen 等希望做服务和应用的企业。企业内部的大模型应用，以前大部分人都说是说着玩的，各种条条框框，使得企业对数据被上传到人工智能企业中非常警惕，目前的 kimi、qwen、讯飞等模型要么对用户免费或者低价，要么开源免费，其真正的目的就是要吸引企业和政府来购买他们的微调服务，他们帮政府或者企业微调一个本地的模型，在这个阶段收费。而这个阶段能够收费的逻辑之所以成立，建立在“本地模型不微调能力很差”、“知识库很难建”、“微调算力需求特别大自己实现不了”等现实逻辑上，导致许多企业和政府部门在这个阶段就已经知难而退了——要建立一个内部大模型我不仅要买算力显卡还要你来给我微调花那么多钱，那么我不做了还不行吗——但是 deepseek 打破了这一点，它在能力上的本质提升使得“不微调就能用得很不错”“用它的能力来弥补简陋的知识库”成为可能，于是他们就不需要购买服务，只需要购买算力就可以了。在这个过程中，大模型的应用会更广泛，更为原子化，算力的需求会成倍增长，而非下降，更多的人和企业将会加入到“人人都有自己的应用”的创新中，产生新的可能。

Even More Shockingly.....

OpenAI o3 Deep Research could directly produce:

Revisiting the McKinley Tariff of 1890 through the Lens
of Modern Trade Theory

[o3 Deep Research]^{*}

Abstract

This paper was written with a one-shot prompt (from Kevin Bryan) on o3 Deep Research, no iteration, 10 minutes of thinking. The Tariff Act of 1890, better known as the McKinley Tariff, was a pivotal episode in U.S. trade policy, dramatically raising import duties to near-record levels. This paper provides an analysis of the McKinley Tariff by integrating historical evidence with insights from modern international trade theory. We revisit the economic and political debates of the 1890s using contemporary trade models—including models of heterogeneous firms (Meltzer, 2003), Ricardian comparative advantage in general equilibrium (Eaton and Kortum, 2002), and other new trade theory advances—to re-evaluate the tariff's impacts. Historical data on trade flows, tariff rates, and industry output are analyzed alongside contemporary accounts to assess the short- and long-run effects of the tariff. We find that while the McKinley Tariff accelerated the development of certain industries (notably textile production) and was implemented in an era of changing comparative advantage for the United States, its overall welfare effects were mixed and likely negative when evaluated with modern trade metrics. The tariff's protective gains to manufacturers came at the cost of higher prices for consumers and implicit burdens on agricultural exporters. However, consistent with modern trade models, the United States' large market power meant some tariff incidence was borne by foreign exporters. The paper concludes by drawing parallels between the McKinley Tariff episode and contemporary trade policy tensions, including recent U.S.-China tariff disputes and debates over protectionism in the global trading system.

Information Frictions and Innovation: A Formal Theory

[o3 Deep Research]^{*}

February 2, 2025

Abstract

This paper was written with a one-shot prompt (from Kevin Bryan) on o3 Deep Research, no iteration, 10 minutes of thinking. This paper develops a formal economic theory exploring how *information frictions* impact innovation, extending beyond the usual focus on incentive problems. We present a model of innovation in which the production of new ideas builds on previous innovations, but knowledge about these prior innovations is distributed across many agents. In this environment, classical welfare theorems break down: key inputs into innovation (knowledge) are unpriced and information is not optimally aggregated, leading to market failures. We formally compare several mechanisms—patents, prizes, advance market commitments (AMCs), and others—in their ability to overcome these information frictions. We derive propositions showing how each mechanism influences the aggregation of dispersed knowledge and the efficiency of innovation, providing rigorous proofs. Our results highlight that beyond providing incentives, innovation institutions serve a critical role in coordinating distributed information. The analysis yields insights into the design of innovation policy when knowledge is decentralized.

What's New (Feb/4/2025-3)

18. Journal of Operations Management (JOM)

- (1) 运营界的“效率魔人”：研究如何让员工996还心怀感恩？JOM会给你发奖杯。
- (2) “优化一切，包括人生”：JOM的编辑可能连早餐麦片都要按算法排列。
- (3) 审稿人的隐藏人设：白天审论文，晚上在淘宝帮人优化购物车。
- (4) 投稿建议：找个效率问题，跑个优化模型，最后用一篇“效率至上”论文征服审稿人。

19. Manufacturing & Service Operations Management (MSOM)

- (1) 运营界的“技术宅”：研究如何用AI让咖啡机不洒奶泡？MSOM会为你开专题。
- (2) “模型越复杂，审稿人越嗨”：简单问题复杂化是MSOM的快乐源泉。
- (3) 审稿人的日常：一边骂你的模型不实用，一边偷偷用在自家车库管理上。
- (4) 投稿建议：找个技术问题，跑个复杂模型，最后用一篇“极客风”论文打动审稿人。

20. Production and Operations Management (POM)

- (1) 运营界的“全能卷王”：从供应链到星巴克排队，没有POM不敢管的闲事。
- (2) “数据要多，故事要野”：在这里，库存管理能扯上宇宙暗物质才算高级。

21. Journal of International Business Studies (JIBS)

- (1) 国际商务的“文化大使”：研究跨国公司的编辑，可能连自己护照都找不着。
- (2) “全球化是个筐，啥都往里装”：在这里，研究本地企业就像在肯德基点麦当劳——不合规矩。
- (3) 审稿人的灵魂提问：“你这研究，能解释为什么美国人觉得皮蛋是恶魔食物吗？”
- (4) 投稿建议：找个全球化问题，凑够跨文化数据，最后用一篇“文化风”论文打动审稿人。

22. Management Science (MS)

- (1) 管理学的“瑞士军刀”：从供应链到员工摸鱼，MS都能用数学模型管一管。
- (2) “生活可以乱，模型不能糙”：MS的编辑可能用优化算法决定今天穿哪只袜子。
- (3) 审稿人的执念：你的模型如果不能预测下一次金融危机，就是花瓶。
- (4) 投稿建议：找个管理问题，跑个复杂模型，最后用一篇“全能风”论文征服审稿人。

23. Operations Research (OR)

- (1) 运营界的“极客之王”：能用数学证明世界是虚拟的？OR会把你供上神坛。
- (2) “实践是理论的绊脚石”：在这里，模型落地不如发论文重要。

(3) 审稿人的终极理想：找到一篇他们的看懂它

17. Journal of Operations Management

- OM 领域的“性价比之王”，比 POMS 好发但比 MS 难啃。

18. Production and Operations Management

- Management: OM 领域的“水龙头”，发文量多到被怀疑放水。

19. Manufacturing and Service Operations Management

- 名字越长越没人懂，但发一篇能保终身教职。

20. Management Science: 管理界的“瑞士军刀”

- 从供应链到恋爱博弈啥都能裁

21. Operations Research: 运筹学家的“玄学阵地”

- 审稿人可能自己都没看懂你的模型。

22. INFORMS Journal on Computing:

- UTD24 里的“备胎”，发它可能只是为了凑数，但总比没有强。

23. Organization Science: 跨学科“缝合怪”

- 要求“既懂博弈论又懂莎士比亚”。

24. Strategic Management Journal: 战略学者的“修仙秘籍”

- 但修到最后发现秘籍是审稿人写的。

Security

Evaluating Security Risk in DeepSeek and Other Frontier Reasoning Models

5 min read

Paul Kassianik, Amin Karbasi

This original research is the result of close collaboration between AI security researchers from Robust Intelligence, now a part of Cisco, and the University of Pennsylvania including Yaron Singer, Amin Karbasi, Paul Kassianik, Mahdi Sabbagh, Hamed Hassani, and George Pappas.

Executive Summary

This article investigates vulnerabilities in DeepSeek R1, a new frontier reasoning model from Chinese AI startup DeepSeek. It has gained global attention for its advanced reasoning capabilities and cost-efficient training method. While its performance rivals state-of-the-art models like OpenAI o1, our security assessment reveals critical safety flaws.

Using algorithmic jailbreaking techniques, our team applied an automated attack methodology on DeepSeek R1 which tested it against 50 random prompts from the HarmBench dataset. These covered six categories of harmful behaviors including cybercrime, misinformation, illegal activities, and general harm.

The results were alarming: DeepSeek R1 exhibited a 100% attack success rate, meaning it failed to block a single harmful prompt. This contrasts starkly with other leading models, which demonstrated at least partial resistance.

OpenAI #50 → #1

2024 → 2025

What's New (Feb/18/2025)

Competitive Programming with Large Reasoning Models
OpenAI*

<https://arxiv.org/abs/2502.06807>

Abstract

We show that reinforcement learning applied to large language models (LLMs) significantly boosts performance on complex coding and reasoning tasks. Additionally, we compare two general-purpose reasoning models — OpenAI o1 and an early checkpoint of o3 — with a domain-specific system, o1-oi, which uses hand-engineered inference strategies designed for competing in the 2024 International Olympiad in Informatics (IOI). We competed live at IOI 2024 with o1-oi and, using hand-crafted test-time strategies, placed in the 49th percentile. Under relaxed competition constraints, o1-oi

What's New (Feb/25/2025)

<https://x.ai/blog/grok-3>

Benchmarks

| Benchmark | Grok 3 | Grok 3 mini | Gemini 2 pro | DeepSeek V3 | Claude 3.5 Sonnet | GPT-4o |
|---------------------|--------|-------------|--------------|-------------|-------------------|--------|
| Math(AIME'24) | 52 | 45 | 38 | 35 | 32 | 10 |
| Science(GPQA) | 75 | 65 | 65 | 65 | 65 | 45 |
| Coding(LCB Oct-Feb) | 57 | 45 | 45 | 45 | 45 | 35 |

Summary. As far as a quick vibe check over ~2 hours this morning, Grok 3 + Thinking feels somewhere around the state of the art territory of OpenAI's strongest models (o1-pro, \$200/month), and slightly better than DeepSeek-R1 and Gemini 2.0 Flash Thinking. Which is quite incredible

Thinking Machines [@thinkymachines](#)

Today, we are excited to announce Thinking Machines Lab (thinkingmachines.ai), an artificial intelligence research and product company. We are scientists, engineers, and builders behind some of the most widely used AI products and libraries, including ChatGPT, Character.ai, PyTorch, and Mistral. Our mission is to make artificial intelligence work for you by building a future where everyone has access to the knowledge and tools to make AI serve their unique needs.

We are committed to open science through publications and code releases, while focusing on human-AI collaboration that serves diverse domains. Our approach embraces co-design of research and products to enable learning from real-world deployment and rapid iteration. This work requires three core foundations: state-of-the-art model intelligence, high-quality infrastructure, and advanced multimodal capabilities. We are committed to building models at the frontier of capabilities to deliver on this promise.

Money currently struggles to buy talent

Money can buy you many things: capital goods, for example, can usually be bought quite straightforwardly, and cannot be bought without a lot of money (or other liquid assets, or non-liquid assets that others are willing to write contracts against, or special government powers). But it is surprisingly hard to convert raw money into labour, in a way that is competitive with top labour.

Consider Blue Origin versus SpaceX. Blue Origin was started two years earlier (2000 v 2002), had much better funding for most of its history, and even today employs almost as many people as SpaceX (11,000 v 13,000). Yet SpaceX has crushingly dominated Blue Origin. In 2000, Jeff Bezos had \$4.7B at hand. But it is hard to see what he could've done to not lose out to the comparatively money-poor SpaceX with its intense culture and outlier talent.

Most people's power/leverage derives from their labour

Labour-replacing AI also deprives almost everyone of their main lever of power and leverage. Most obviously, if you're the average Joe, you have money because someone somewhere pays you to spend your mental and/or physical efforts solving their problems.
